NOTE: The feed stock used in the manufacture of some fittings may vary from DR18.

- CAUTION:**
- At a minimum, when these products are used in a gravity sewer system, installation per ASTM D2321 and the PVC Pipe Association (Uni-Bell) should be followed.
 - Sewer service laterals are to be installed at an angle of no more than 45° from the horizontal unless provisions are made to prevent loads and displacements from differential settlement to be applied to the pipe and fittings. Failure of a fitting in a service lateral whose rise at any point is greater than 45° indicates inadequate provisions and/or inadequate construction of the provisions.
 - All joints including, mating pipe and fittings must be straight and aligned with no angular joint deflection. Bending of the pipe for any reason is prohibited.

Accompanying figures are to aid identification of the configuration in a general way and do not necessarily indicate exact form. Fabricated fittings (indicated by Styles "F" and "FTO") have the form typical of fittings fabricated from pipe. Style "FTO" indicates a fitting that it is fabricated from pipe to order requiring a lead time. "Molded" fittings (indicated by Styles "M" and "MA") have the more compact form of injection molded fittings. Fittings of Style "MA" are assembled from molded and/or extruded components.
