

INSTALLATION INSTRUCTIONS

1. Cut pipe to length

Cut pipe square and to length using the flange on the central body as a guide. Ensure end of connecting pipe is undamaged and clean.

2. Prepare fitting

To ensure adequate insertion depth, witness mark the pipe to the back of the flange. A marker pen can be used or use of a thumb is suitable.

3. Pipe Insertion

Ensure the nut is backed off and 3 threads are showing. (Pipes at the top end of the fitting tolerance may require 5 threads showing.) Insert pipe to the correct depth.

4. Nut tightening

Tighten the nut firmly with a wrench. The nut will not butt against the body flange when the pipe size is at the top end of the fitting tolerance.

5. Fully Installed

The fitting is fully installed when the nut cannot be tightened any further with reasonable force.
